ECT - RESULT EXPEDIENT CHECKLIST (ENGLISH)

Checklist Item (Test Case / Requirement)

Design and Viewport Controls

Viewport Adaptation (<320px): Verify that the layout does not break when the screen width is reduced down to 320px.

Mobile Layout Control (320px - 375px): Verify that elements are fluid and expand appropriately as the viewport changes.

Advanced Mobile Layout (375px - 768px): Verify that elements are aligned correctly according to the design specifications.

Tablet Layout (768px - 1280px): Verify that the interface is displayed correctly according to tablet standards.

Desktop Layout (≥1280px): Verify that desktop layout rules and positioning are fully and accurately applied.

Authenticated User & Auth Pages

Landing Page Visuals: Verify that the application name (logo), promotional image, and call-to-action phrase are displayed correctly.

Landing Page Navigation: Verify that clicking the 'Registration' button redirects to the registration form and 'Log In' redirects to the login form.

Login Form Elements: Verify that E-mail, Password fields, and the 'Log In Now' button are present on the form.

Login Validation/Error: Verify that clicking 'Log In Now' with empty fields or invalid formats triggers an appropriate error message.

Login Success Status: Verify that the user is redirected to the home dashboard upon successful authentication.

Registration Form Elements: Verify that User Name, E-mail, Password fields, and the 'Register Now' button are present on the form.

Registration Error Management: Verify that clicking 'Register Now' with inputs violating validation rules triggers an error message.

Registration Success Status: Verify that completing the form with valid data registers the user and opens the home dashboard.

E-mail Field Validation: Verify that the field is mandatory, supports Latin characters/numbers, and contains exactly one '@' and one '.' in the host part.

Password Field Validation: Verify that the field is mandatory, cannot contain spaces, supports Latin letters, numbers, symbols, and is between 8 and 64 characters.

Password Visibility: Verify that the password is hidden by default and becomes visible when the eye icon is clicked.

User Name Field Validation: Verify that it supports Latin characters, numbers, symbols, and strictly adheres to the 2 to 32 characters limit.

Google OAuth Integration: Verify that users can securely sign in or authenticate via their Google Account.

Authenticated User - Header & Profile Management

Theme Switching: Verify that choosing Light, Violet, or Dark from the theme selector immediately updates the UI and persists on subsequent logins.

User Info Block: Verify that the active username and avatar are displayed correctly in the header.
Header Layout Elements: Verify that the logo and app name are visible on desktop, and the 'hamburger' menu button replaces them on mobile/tablet viewports.
Edit Profile Modal: Verify that clicking the user avatar successfully opens the 'Edit Profile' modal.
Avatar Update Action: Verify that the '+' button inside the profile modal functions correctly to change the profile picture.
Profile Form Pre-population: Verify that User Name, Email, and Password fields are pre-filled with the current user's data.
Profile Modal Cancellation: Verify that clicking the close (x) button closes the modal without saving any modifications.
Profile Success/Error Action: Verify that clicking 'Send' with valid data updates the profile, while invalid inputs show validation errors.

ations

Sidebar Responsiveness: Verify that clicking the burger menu on mobile and tablet views opens the Sidebar panel.
Sidebar Content Verification: Verify that the Sidebar contains the Logo, 'Create New Board' button, Board list, 'Need Help' section, and 'Log Out' button.
Log Out Action: Verify that clicking the Log Out button terminates the active session and redirects the user back to the Landing Page.
Create Board Modal: Verify that clicking the button opens the modal, and the Board Name field is marked as mandatory.
Board Default Options: Verify that the first icon in the list and the 'no background' option are selected by default.
Board Creation Success/Error: Verify that clicking 'Create' successfully adds the new board if the title is filled, otherwise blocks execution.
Edit Board Action: Verify that clicking the edit (pencil) icon opens the 'Edit Board' modal with current data populated, allowing successful update.
Delete Board Action: Verify that clicking the delete icon permanently removes the respective board from the list.
Need Help Form Modal: Verify that clicking the link opens the assistance modal correctly.
Need Help Validation: Verify that the E-mail field (valid format) and Message text field are mandatory and cannot be left blank.
Need Help Submission: Verify that clicking 'Send' validates fields and successfully dispatches the request to the server.

oard (Board Management, Filters & Columns)

Dashboard General Layout: Verify that the active board title, 'Filters' button, and 'Add another column' button are displayed correctly.
Horizontal Scroll Management: Verify that horizontal scrolling works for columns when total width exceeds the viewport, keeping Header and Sidebar fixed.
Vertical Scroll Management: Verify that each individual column has its own vertical scrollbar when its content height exceeds the screen height.
Filters Modal Control: Verify that clicking the 'Filters' button opens a modal containing functional background image switching options.

Priority Filtering Action: Verify that filtering by task priorities (low, medium, high, without) immediately filters the visible cards on the board.
Clear Filters Action: Verify that clicking 'Show All' resets all active priority filters and displays all cards unconditionally.
Add Column Action: Verify that the modal opens successfully and typing a title followed by 'Add' appends a new column to the right, pushing the button further.
Edit Column Action: Verify that clicking the edit icon pre-fills the current column header and updates successfully given a non-empty value.
Delete Column Action: Verify that clicking the column delete icon completely removes the column and all its nested cards from the board.

4 Card Add/Edit Form

Card Element Integrity: Verify that task title, description (truncated with '...' if long), priority color dot, and deadline are displayed correctly.
Text Overflow Handling: Verify that excessively long description text does not break the card layout and truncates gracefully.
Move Card (Change Column): Verify that clicking the move button on a card triggers a popover to select other columns and successfully moves the card.
Delete Card Action: Verify that clicking the delete button successfully drops the task from its column.
Deadline Notification (Bell Icon): Verify that the system automatically displays a notification bell icon on cards whose deadline is 'today'.
Add/Edit Card Modal: Verify that clicking 'Add another card' or the edit icon opens the card form layout with appropriate contextual fields.
Default Card Priority: Verify that the priority selection defaults to the last option, 'without' (grey color dot).
Calendar/Date Picker Constraints: Verify that past dates are disabled, and users can only select today's date or future dates for the deadline.
Card Form Submission: Verify that confirming the form updates or adds the card in the database, or outputs proper error notifications on failure.

Status	Jira Bug Reference & Notes
Failed	[QMP-17 / T229] Layout breaks on width reduction; text overflows the boundaries (Text overflow observed).
Passed	Passed according to layout flow validation.
Passed	Passed successfully.
