Description**TestRail Link:**T229: Homepage Responsiveness Validation <https://goit6g43.testrail.io/index.php?/tests/view/229>**Preconditions:**

- User is logged in
- Application is accessible
- DevTools responsive mode is enabled

Steps to Reproduce:

- Set viewport width to ≤ 320 px and verify layout
- Gradually increase to 320px – 374px and observe flexible behavior
- Set viewport to 375px – 767px (mobile design range)
- Set viewport to 768px – 1279px (tablet design range)
- Set viewport to ≥ 1280 px (desktop design range)
- Observe layout consistency while resizing between breakpoints

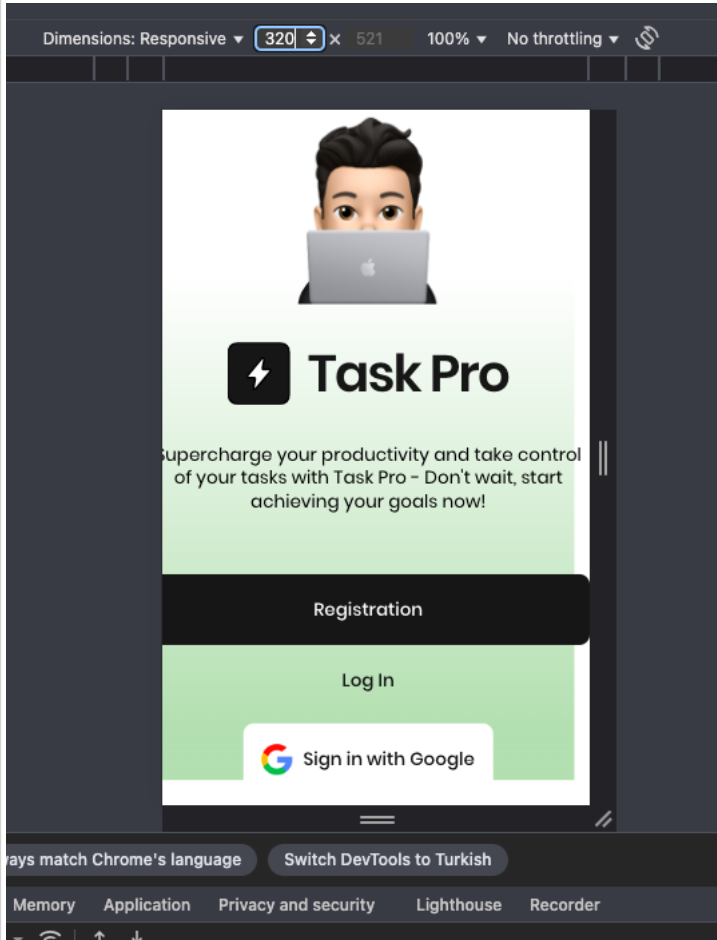

— At all breakpoints, layout should adapt according to design rules

- No horizontal scrolling should appear at any resolution
- UI elements should remain within viewport boundaries
- Text should wrap correctly and remain readable
- Components should not overlap or break layout
- Header/sidebar behavior should remain stable across sizes
- Transitions between breakpoints should be smooth and consistent

— Texts overflow outside screen boundaries

— Failed
